Draft Forest Plan Released

After seven long years of meetings, analysis, and waiting, the Draft of the Land and Resource Management Plan for the Chattahoochee-Oconee National Forest has finally been released. Georgia Forestwatch, along with many other conservation groups in the region have devoted much time and energy to the plan revision process, and we were all very disappointed with the changes that have been made. For example, as of August 2002, we had two new recommended Wilderness areas (Kelly Ridge and Mountaintown) as well as protection for the Conasauga River, which is widely considered one of the freshwater diversity hotspots of the country.

Since August the Forest Service disengaged from public participation in order to complete the task of finalizing the plan. Little did we know that this also meant that there would be substantial changes that disregarded years of public input.

Both the Mountaintown and Kelly Ridge Roadless areas are now in a prescription called remote Backcountry recreation/non-mo

GFW Editorial
by Brent Martin, GFW Executive Director

Procrastination is the Art of Keeping up with Yesterday –
- Don Marquis

A
ter seven long years of numer-
ous public comment periods, dozens of public meetings, and
thousands of hours of Georgia Forestwatch input and analysis (not to
mention dollars), the Forest Service fi-
nally released Draft plans for five southern Appalachian forests in early April.
At the last public comment period in
September 2002 we had been told very
little would change with the plans as they
gang to prepare the Drafts over the next
everal months and so we took them for
their word. Granted, we wanted a lot to
t change — more wil-
erness recommendations, better ripar-
ian protection, a roads policy that de-
commissioned bad roads and prioritized maintenance, and
much more, but we thought that we
would at least see a Draft plan this April
that was close to the one presented to
the public last fall. After all, they had
told us very little would change, and the
plan that was presented last fall was the
plan we had collaborated on for seven
years. What a slap in the face.

The Draft that was released for
comment in early April has gton the
previous wilderness recommendations,
ignored the roads policy and regional old
growth guidance, placed close to two-
thirds of the forest in management that
could potentially have new ORV trails, and
revitalized the antiquated language of
timber targets. So much for past
collaboration and public participation.
It was almost as if the entire plan had
been turned over to our state game
agency, ORV user groups, and timber
industry executives for them to rewrite,
empowered greatly by the
environmental views of the current
administration. Regardless, our
confidence and trust in the Gainesville
office has diminished - a sad state of
affairs after we have worked so hard to
create a plan that we felt was moderate
in its recommendations and in which
over seventy organizations had built
consensus for new
wilderness and scenic
recommendations.

Given the fact that the Forest Service is arguably one of the most
politicized agencies in the Federal govern-
ment, we shouldn’t be
surprised, I know. We
expected some fallout
from changes in ad-
nimations, and have
witnessed it in other
areas for some time
now; however, this new
Draft plan is our most
drastic encounter with
the fallout yet. So, back to square one
for us on getting decent forest plans.
And don’t look to see a new plan imple-
mented anytime soon. The Final is due
out in the fall, and the plan is so full of
appealable items that we will no doubt
end up in court with litigation drag-
ging on into the unforeseeable future.
That’s a tragedy, of course, but perhaps
not as great a one as the lack of trust
and confidence that will permeate pub-
lic participation (if public participation
survives) for many years to come. Re-
gardless, our voices have been many on
the fate of this forest, and our organi-
zation and knowledge have grown and
will continue to grow for the years to
come. So keep the faith, write the let-
ters, and get into the forest as often as
you can. OS see page 7 for FS contact info
Georgia Forestwatch Salamander Survey is now underway thanks to Patagonia for a grant to survey Kelly Ridge Roadless area. Salamander populations in the Southeast are on the decline and many of them are sensitive to timber harvesting and road building. We have contracted two herpetologists from UGA, Matt Elliott and Stacy Smith to survey the beautiful and remote Kelly Ridge Roadless area. Kelly Ridge is renown for it’s salamander diversity and we are pleased that once Patagonia has stepped up to the plate to help GFW gain greater scientific understanding of the area. If you would like to learn more about salamanders, help the scientific community learn more about their locations in remote areas, and spend a day in Kelly Ridge, please call the office at (706) 635-8733 and ask to speak with Katherine, our staff ecologist, about volunteering for the survey. We plan on being in the field on April 24th and 25th and on May 17th and 18th.

Forest Protections & Public Participation At Risk

This information is provided courtesy of the American Lands Alliance web site (www.americanlands.org) and the Heritage Forests Campaign web site (www.ourforests.org). Send your complaints to The White House, Senators Miller and Chambliss, and Representatives Deal and Norwood.

1. Roadless Area Conservation Rule

On December 12, 2002, in a 2-1 ruling, the 9th Circuit Court of Appeals ruled in favor of the American people when it lifted an injunction on the Roadless Area Conservation Rule. The 9th Circuit Court ruled that the rulemaking process met all public participation requirements. The State of Idaho, Boise Cascade and other timber allies have filed a motion for a rehearing in the 9th Circuit, which would allow for a review of the decision in front of a larger panel of judges. This is unlikely since the opinion from the smaller panel of judges stated that the plaintiffs do not have a high likelihood of success. The U.S. Forest Service has publicly stated its intent to amend the roadless rule. In testimony to the U.S. Senate Energy and Natural Resources Committee in February 2003, Undersecretary of Agriculture and former timber lobbyist Mark Rey said an amended rule could be expected “within a few months.” Given the Bush Administration’s ongoing efforts to undermine protections for our last wild forests, any amendments they propose are likely to gut the roadless rule.

2. Putting Logging Ahead of Community Protection

The Forest Service and BLM are failing to focus fuel treatments near threatened homes and communities as called for in the National Fire Plan. Only 30% of the acres treated this year will be in the agencies’ broadly defined wildland/urban interface. In addition, the agencies are using the fuels program to justify the cutting of large fire-resistant trees, including old growth. The administration is seeking to open these logging loopholes even wider in the Healthy Forest Initiative and would continue to put timber industry profits ahead of real community protection.

3. The Healthy Forests Initiative

This administration initiative unveiled in August would rollback environmental protections and public involvement by abolishing the National Environmental Policy Act (NEPA) requirements on fuel reduction and “forest health” projects. In addition, the plan would make permanent changes in forest regulations to abolish citizen appeals and to provide unlimited goods for services stewardship contracts that encourage logging. The administration intention is to pay for this program through increased logging, including logging of old growth forests. Elements of this proposal were included in two House bills, H.R. 5376 and H.R. 5319.

4. Stewardship Contracting

...continued page 6
Georgia's Land and Water Conservation Fund (LWCF) $s's Slashed for 2004

After a few years of seeing increases to Georgia's Forest Service budget to buy key tracts in the north Georgia mountains, our 2004 budget stands to only see a $1 million allocation. Georgia's LWCF budget for 2003 was $3.2 million, which was to buy a key Yonah Mountain tract, as well as some key Conasauga and Jacks river tracts, but was borrowed for the fire efforts out west. The Forest Service is still, as of press time, anxiously awaiting repayment. The Forest Service's LWCF request for Georgia in 2004 is $6 million, but due to Presidential slashing of Land and Water Conservation dollars our Georgia allocation is only $1 million, and we might be lucky to see that. The total Federal LWCF budget has been cut almost forty percent from its $569 million dollar level in 2002, with the President's 2004 budget weighing in at $347 million. This budget affects all Federal land agencies, such as the National Park Service and Fish and Wildlife Service, but the Forest Service is being hit the hardest, with a 70 percent reduction in its allocation from $151 million in 2002 to $45 million in 2004. Please write your Congressional Representatives and ask them to work to get the full Forest Service request of $6,000,000 for Georgia. Private land is being developed rapidly and real estate prices are continually increasing in the north Georgia mountains. Due to these factors, it is important that the Forest Service in north Georgia gets as much of the LWCF budget as it can. The window is closing and we need to act fast.

-Brent Martin

Tallulah District Update

A lot is happening on the Tallulah district these days. The Forest Service is requesting comments on several proposals of interest. Included among them is a proposal to release a predator beetle as a biological control for the growing population of the Hemlock Woolly Adelgid (HWA). HWA is a death sentence for Hemlock trees and was discovered in the northeastern sections of the district about a year ago. As well, the district is proposing to do maintenance, restoration, and soil stabilization on several problem roads complete with a few small road closures. On the other hand, we have received a proposal to expand a wildlife opening within the Sarah's Creek Roadless Area. The opening would be expanded by 8.1 acres. Though the area has been damaged by Southern Pine Beetle, its roadless character should prevent it from being a target for intensive game management. Finally, the Southern Environmental Law Center, on behalf of Georgia Forestwatch and the Chattahoochee Conservancy, submitted an appeal of the recent Environmental Assessment (EA) and Finding of No Significant Impact (FONSI) for the North Burton Powerline special use permit on the Tallulah Ranger District. Georgia Transmission Company (GTC) submitted a special use permit to create a 115 kV transmission line over the top of and down the steep north slope of Glassy Mountain in 2000 and the EA and FONSI were released in February of this year. According to experts contracted by the Chattahoochee Conservancy, the line is unnecessary to meet energy demands. Additionally, it spans a beautiful waterfall and botanically rich north-facing slope.

-Katherine Groves
It is time for us to demand proper protection for our National treasures. If you have been involved with this process in the past, now is your chance to renew your commitment. If you have never been involved with the planning process, now is the time to learn. Do not be intimidated by strange language or fancy maps. Remember that if you care, you count. Though many of the recent proposed changes to environmental laws are trying to take it away, it is still your right to have a say in how your public lands are managed.

- Katherine Groves, Georgia Forestwatch Staff Ecologist

National Forest Protections At Risk... continued from page 3...

In the unfortunate passage of the Omnibus Appropriations Bill for Fiscal Year 2003 on February 14, 2003, Congress approved many anti-environmental riders, including making the Stewardship Contracting program permanent for the next 10 years and extending the program to include the Bureau of Land Management (BLM).

The program was prematurely made permanent without any evidence of the program’s performance, the ecological impacts, or assessment of the intended local workforce benefits. The Stewardship Contracting program was formerly a pilot demonstration program with Congress approving a total of 84 pilot projects on National Forests since Fiscal Year 1999. According to the Pinchot Institute, the organization overseeing the program’s evaluation, only 31 of the pilot projects have completed NEPA, only 22 have developed contracts, and only 11 have been awarded to successful bidders. Additionally, 13 of the pilot projects were so controversial that they were appealed and/or litigated.

5. NEPA Rollbacks Threaten 30 Years of Environmental Progress

In addition to the Healthy Forests Initiative, which proposes to abolish requirements of the National Environmental Policy Act (NEPA) for fuel reduction projects, the administration's draft planning regulations would abolish NEPA analysis for forest plan amendments and revisions. This would end most public participation on National Forest issues because it was due to NEPA's requirements that the public had an opportunity to comment.

6. Undermining the National Forest Management Act

In 1976, the National Forest Management Act (NFMA) was passed to ensure that the cumulative effects of numerous projects across the landscape would not undermine the sustainability of our National Forests. The Bush administration has proposed changes to the regulations implementing NFMA that prioritizes logging, resource extraction, and “multiple-use” over sustainability. The revision would remove science and the public from the Forest Service’s decision making process, jettison species protections, open the door to uncontrolled logging, and give the Forest Service unprecedented discretion in creating and complying with management plans. The Bush administration’s regulations were written without independent scientists and are in direct defiance of the recommendations of the last Committee of Scientists to consult on NFMA. The revisions undermine the very purpose of NFMA by largely removing science from the development and monitoring of the management plans and making the plans voluntary and non-binding.
**Ephemera**

Are you suffering from a need to see the forest for the forest plans? How's your love of detail and subtlety holding up? I use this space to feed our well of wonder, to replace long days of legalese and Forest Service terminology and analysis to allow our minds to percolate with life again like the limestone karsts of my favorite lands. Bring your brain back to columnar black walnut branches against spring's sharp chartreuse. Bring it to tiny night moths that witch hazel & serviceberry rely on for pollination. The terminology will take you away from your love of these things, if you don't take care. Bring yourself to dew dancing on maidenhair fern and read some W.B. Yeats if the case is dire. Remember, there is nothing more mighty than the delicate and few things more enduring than the ancient equisetum. When someone says "decay" say, resurrection fern. When someone says "early successional habitat" say, wind throw & blow down. When someone says "senescent" say, Old Growth. These are future Georgian's last forests and the need to be kept. Feed the wellspring of your mind with this infinitesimal land, watch the love of the rain falling, then get to work. ~ a.f.m. ~

**Off Road Vehicle Update -
House Bill 260 Goes Down for Good**

For the third year in a row Georgia Forestwatch has defeated an attempt by Representative Ralph Twiggs and newcomer Rep. Jack White to legalize off road vehicles on our National Forest roads. Despite promises from members of the Motor Vehicle Committee, it passed through and was sent on to the Rules Committee for a vote. It was defeated twice on a voice vote in the Rules Committee, and we considered it dead until Rep. White began waving around a tag that he said was from an ORV tagged and licensed in the state of Tennessee. Upon research we found that the tag had actually been taken off a street legal motorcycle and was being paraded around by White to hopefully convince his peers that these vehicles could be tagged in other states. We were also able to get the state of Tennessee to write a letter stating that TN did not license or tag ORVs. This miserable attempt at misrepresenting the facts by White cost us a great deal of time and energy to counter, but it paid off the last day of the session when we were able to suppress the bill from coming up for another vote.

The Forest Service then took quick action to post on their website that they could not implement their proposed policy to allow ORVs on their roads, as the State had not passed a bill that would let them. If you haven't seen this posting yet, please take a look at [www.fs.fed.us/conf/](http://www.fs.fed.us/conf/) The Forest Service places the blame for their decision on the state, which of course will encourage the ORV users' efforts in the Legislature for next year. We'll keep you posted. ~Brent Martin
